

Organisation

The Celtic Manor

Industry

Hospitality and leisure

Background

With a constantly growing number of staff members, coupled with the ever increasing risk of cyber-attacks, it was of vital importance that The Celtic Manor end-users were trained in cyber security, taught to identify common attack vectors, and given the skills to mitigate serious risks to business.

The Problem

Recognising the need for staff to be well trained in matters of information security, particularly when working with customer data, Celtic Manor sought a solution that would help build a secure culture of vigilant employees.

The Solution

Hut Six's interactive and engaging cybersecurity awareness training, phishing simulator and learning management system.

An industry leader in tourism, hospitality and golf, The Celtic Manor is internationally renowned as a first-class travel and leisure destination in Newport, South Wales. Hosting international events, such as the 2010 Ryder Cup and the 2014 NATO Summit, The Celtic Manor has earned its place as an iconic Welsh destination.

“Hut Six was the product that offered the most value to our business - The training videos & scenarios were exactly what we needed as a company.”

By choosing Hut Six's interactive and engaging information awareness training, enterprise level phishing simulator and easy to use learning management system, The Celtic Manor has helped ensure both its integrity and robustness as a business.

“Hut Six have played a vital part in raising the awareness levels of potential cyber-security threats across the entire workforce. We have seen a cultural change in the organisation.”

With over 1,000 employees, The Celtic Manor recognised the need for a solution that ensures staff are equipped to spot potential risks to business security, whilst building a culture where secure working practices become second nature.

- Declan Bloomer, IT Contract Manager
